How does transparency support the increase of ambition in the NDC in your country?

- By providing information
- Transparency wins political buy-in
- Data and evidence for policy making and identification of needs
- Transparency provides timely data for decision making
- Transparency gives NGOs and other actors more information and tools to pressure the government to be more ambitious
- Without knowing where we are, we can’t know where we are going: transparency is the key to understand whether we’re on track to meet established goals
- By mapping progress and gaps across different sectors to see where ambition can be increased
- Informs other government processes for national development agenda and impact assessment
- Engagement of stakeholders commitments and buy in
How does transparency support the increase of ambition in the NDC in your country?

- Access finance and keeping up with the peers
- Enhances potential for political buy-in to engage other ministries and stakeholders
- More information on greenhouse gas inventories helps countries understand the situation in their own country, prompts action on gaps and helps show what the possibilities are with the current NDC and across sectors
- More information data can drive more transparency in our NDC
- Helps identify gaps and capacity building needs
- A transparent system that involves civil society can help promote increased ambition
- More transparent system allows countries to have the real picture of GHG emissions
- We are developing reporting tools because we now have limitations in data collection at sectoral level. It will be our first BUR
- Provides a good link to energy and other sectoral policies
How does transparency support the increase of ambition in the NDC in your country?

- AFOLU
- Increase capacity building
- Consolidated methodologies
- Lack of awareness
- Data availability and collection
What are the challenges in transparency and in preparing/updating the NDC and how does your country go about these challenges?
